Reading Assignment 2
Due: July 2, 2003

Read “Hormone Studies: What Went Wrong?” and “Older Way to Treat Hypertension Found Best” from the New York Times and then answer the following questions.

1. What types of studies or experiments were conducted?

2. In each of the experiments, can you classify both the treatment and control groups – include the size, gender and other specifics of each group?

3. What population that can be directly affected or impacted by these studies?

5. What initiated each of these studies?

6. What was the outcome of each study? In “Hormone Studies: What Went Wrong?” how do the results of the two studies compare? How do the researchers explain the differences?
