

Lecture 11

Seasonal Arima

2/22/2018

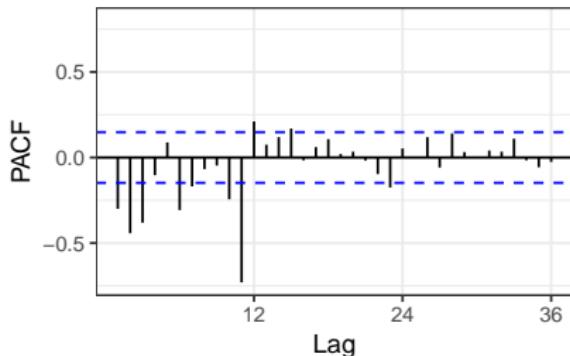

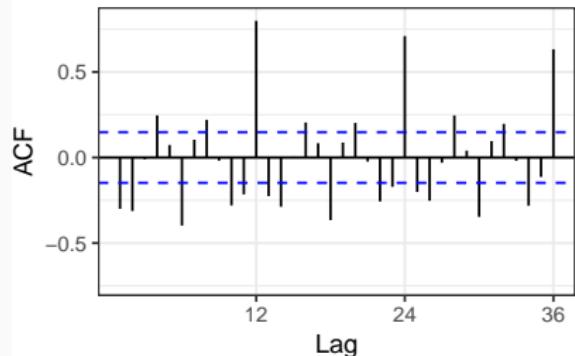

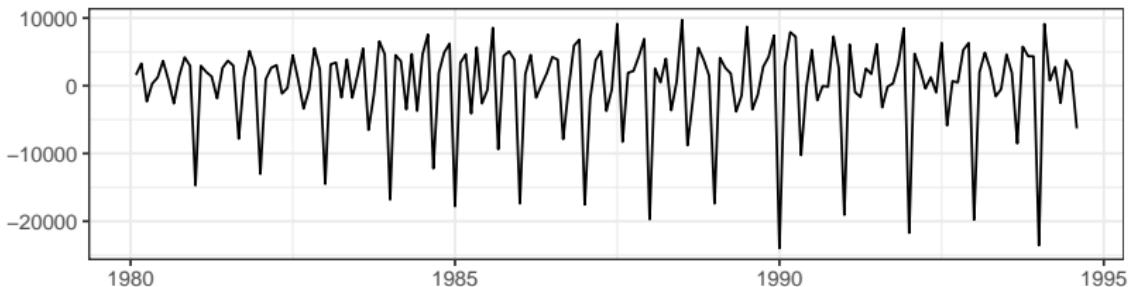

Australian Wine Sales Example (Lecture 6)

Australian total wine sales by wine makers in bottles \leq 1 litre. Jan 1980 – Aug 1994.

Differencing

diff(wineind)

Seasonal Arima

We can extend the existing Arima model to handle these higher order lags (without having to include all of the intervening lags).

Seasonal ARIMA $(p, d, q) \times (P, D, Q)_s$:

$$\Phi_P(L^s) \phi_p(L) \Delta_s^D \Delta^d y_t = \delta + \Theta_Q(L^s) \theta_q(L) w_t$$

Seasonal Arima

We can extend the existing Arima model to handle these higher order lags (without having to include all of the intervening lags).

Seasonal ARIMA $(p, d, q) \times (P, D, Q)_s$:

$$\Phi_P(L^s) \phi_p(L) \Delta_s^D \Delta^d y_t = \delta + \Theta_Q(L^s) \theta_q(L) w_t$$

where

$$\phi_p(L) = 1 - \phi_1 L - \phi_2 L^2 - \dots - \phi_p L^p$$

$$\theta_q(L) = 1 + \theta_1 L + \theta_2 L^2 + \dots + \theta_p L^q$$

$$\Delta^d = (1 - L)^d$$

$$\Phi_P(L^s) = 1 - \Phi_1 L^s - \Phi_2 L^{2s} - \dots - \Phi_P L^{Ps}$$

$$\Theta_Q(L^s) = 1 + \Theta_1 L + \Theta_2 L^{2s} + \dots + \theta_p L^{Qs}$$

$$\Delta_s^D = (1 - L^s)^D$$

Seasonal Arima for wineind - AR

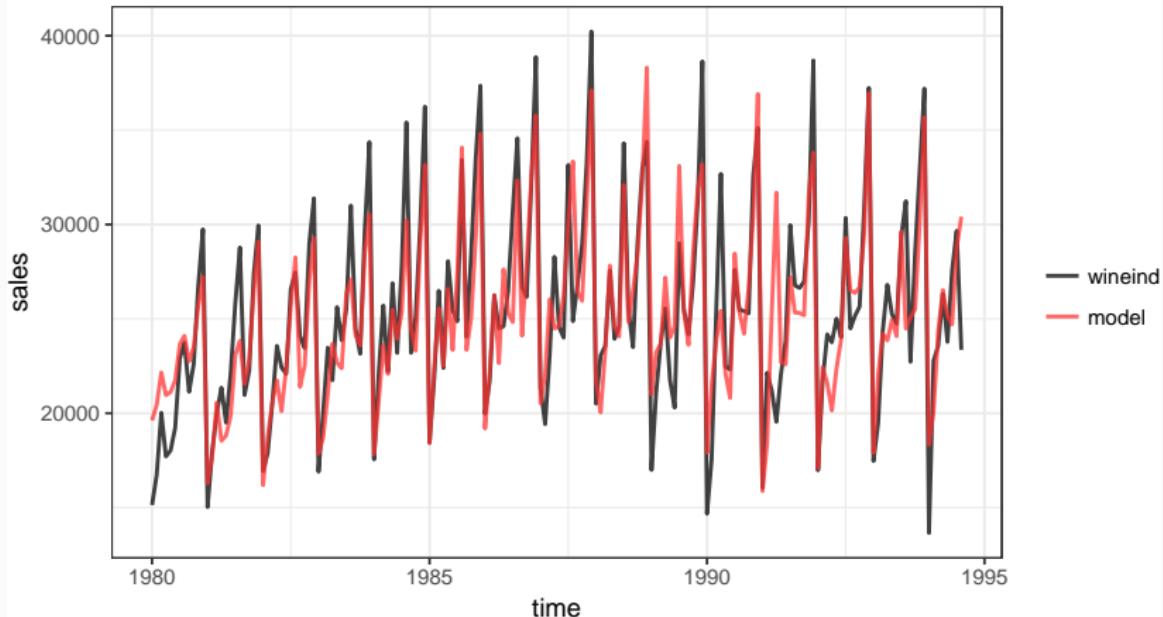

Lets consider an ARIMA(0, 0, 0) \times (1, 0, 0)₁₂:

$$(1 - \Phi_1 L^{12}) y_t = \delta + w_t$$
$$y_t = \Phi_1 y_{t-12} + \delta + w_t$$

```
(m1.1 = forecast::Arima(wineind, seasonal=list(order=c(1,0,0), period=12)))
## Series: wineind
## ARIMA(0,0,0)(1,0,0)[12] with non-zero mean
##
## Coefficients:
##             sar1      mean
##             0.8780  24489.243
## s.e.   0.0314   1154.487
