Psychology Journal Bans Significance Testing

Posted by Steven Novella on February 25, 2015 99 Comments

This is perhaps the first real crack in the wall of hypothesis significance testing procedure (NHST). *Psychology (BASP)*, has [banned the use of \$N\$](#) from their journal. They previously had stated that it is no longer required but can be optional included. NHST is

The type of analysis being banned is often called null hypothesis significance testing (NHST). It has been highly critical in the pages of SBM of over a decade.

Psychology journal bans P values

Test for reliability of results 'too easy to pass', say editors.

Chris Woolston

A controversial statistical test has finally met its end, at least in one journal. Earlier this month, the editors of *Basic and Applied Social Psychology (BASP)* announced that the journal would no longer publish papers containing P values because the statistics were too often used to support lower-quality research¹.

Authors are still free to submit papers to *BASP* with P values and other statistical measures that form part of 'null hypothesis significance testing' (NHST), but the numbers will be removed before
